

2014年 第5問

5  $\sin\theta\left(\frac{1}{\tan\theta} + \frac{\sin\theta}{\cos\theta-1}\right) = a$  ( $0 < \theta < \frac{\pi}{2}$ ) であるとき,  $a^2$  の値を求めよ.

$$\sin\theta \cdot \frac{\cos\theta}{\sin\theta} + \frac{\sin^2\theta}{\cos\theta-1} = a$$

$$\therefore \cos\theta + \frac{1-\cos^2\theta}{\cos\theta-1} = a$$

$$\therefore \cos\theta - (1+\cos\theta) = a$$

$$\therefore a = -1 \quad \therefore \underline{a^2 = 1} //$$
